DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 09/06/2005 has been entered.

Claims 30-35 are added. Claims 8-11,21,30-35 are pending.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I claims 8-11,21, drawn to method for treatment cardiac disfunction by decreasing pulmonary congestion.

Group II, claim(s) 30-32, drawn to method for treatment cardiac disfunction by recessing cardiac hypertrophy.

Group III, claims 33-35, drawn to method of decreasing heart weight.

Each of the Groups I-II/III claim a distinct and separate method of treatment: Group I – by decreasing pulmonary congestion, and Groups II and III – by recessing cardiac hypertrophy. Thus, groups I-II/III do not share a corresponding special technical feature.

With respect to Groups II and III, the common technical feature for these groups is treatment of cardiac hypertrophy using natriuretic peptide receptor activator. The prominent difference between the methods is that while method of Group II specifies that the effect occurs without causing diuretic and hypotensive effect, method of Group III is inclusive of such mechanism. Note that this distinction was recognized as critical in the course of prosecution of this case. Treatment of cardiac hypertrophy using natriuretic peptide receptor activator is not the contribution over the prior art because it is suggested by references teaching treatment of cardiac hypertrophy using natriuretic peptide receptor activators. For example, see reference of Blane used in the art rejections during the course of prosecution, which teaches use of ANP to treat cardiac hypertrophy. Therefore, the lack of unity is present because the linking technical feature is not a “special technical feature” as defined by PCT Rule 13.2.

Because these inventions are distinct for the reasons given and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
